PROJECT TITLE

Problem-Solving Through Responsive Web Design: A Three-Stage Logbook Project

To analyze a social or workplace problem, propose possible solutions, and communicate these solutions through a responsive webpage built strictly with concepts from freeCodeCamp’s Responsive Web Designer. The project is divided into three delivery moments, each accompanied by a logbook entry documenting thought process, design decisions, and progress.

Overview of the 3 Delivery Moments

1. **Moment 1 — Problem Identification & Initial Ideas**
Students submit and present the problem, context, and first ideas for solutions.
2. **Moment 2 — Webpage Structure & Prototype Development**
Students submit early HTML structure and CSS planning.
3. **Moment 3 — Complete Responsive Webpage + Final Logbook**
Students deliver the final product, justify decisions, and present results.

Each moment includes:

- A deliverable
- A short oral socialization
- A logbook entry

MOMENT 1 — Problem Selection & Solution Brainstorm

- ✓ Objectives
- Choose a real social or workplace problem.
 - Explain why this problem is relevant.
 - Brainstorm at least 3 possible solutions.
 - Produce the first logbook entry documenting analysis.

Choose a Problem from a Social or Workplace Context from the following list

✓ Social Context Options

- Digital literacy barriers in the community
- Environmental awareness & recycling habits
- Cyberbullying in teenagers
- Accessibility barriers for people with disabilities
- The digital divide in rural areas
- Promoting healthy online habits

✓ Workplace Context Options

- Poor communication in development teams
- Low productivity in remote work settings
- High error rate in software documentation
- Lack of version control discipline
- Onboarding difficulties for new developers
- Problems in project planning or estimation

✓ Deliverables

1. **Short written Problem Report (1–2 pages)**

Should include:

 - Problem title
 - Context (social or workplace)
 - Who is affected
 - Why the problem matters
 - At least three proposed solutions
 - Supporting image or diagram (optional)
2. **Logbook Entry #1**

Students must answer:

 - What problem did I choose and why?
 - What contexts or data influenced my choice?
 - What are the possible solutions I identified?
 - What questions or doubts do I have?
3. **5-minute Oral Socialization**

Students share their problem and initial ideas with classmates.

MOMENT 2 — Webpage Structure & Prototype

“Building the Foundation”

✓ Objectives

- Create the first **HTML structure** of the webpage.
- Organize sections using **semantic tags**.
- Begin prototyping layout using **FCC-compliant CSS (Flexbox & Grid)**.
- Provide placeholders for content and images.
- Document development progress in the logbook.

✓ Deliverables

- Initial HTML File**

Must include:

 - header + nav
 - main with at least 3 sections: Problem, Solutions, Contact
 - Semantic structure using: section, article, h1–h3, ul/ol, footer
- Early CSS File**

 - Base colors, typography, margin/padding
 - First responsive adjustments
 - Early Flexbox/Grid layout
- Wireframe or Page Sketch**

 - Can be hand-drawn or digital
- **Logbook Entry #2**
 - Students must describe:
 - What HTML structure did I design and why?
 - What CSS strategies am I planning (Flexbox, Grid, colors, spacing)?
 - What challenges appeared?
 - What feedback did I receive after socialization?
- Short Socialization Round**

 - Students present their prototype to classmates.
 - They receive feedback on layout and structure.

- Placeholder images with *alt* text

MOMENT 3 — Final Responsive Webpage + Logbook

“Presenting the Solution”

✓ Objectives

- Deliver a complete, fully responsive webpage.
- Implement all FCC concepts: Flexbox, Grid, forms, accessibility, media queries, responsive images.
- Communicate solutions clearly and visually.
- Complete a reflective logbook documenting the full process.

✓ Deliverables

1. Final Webpage (HTML + CSS files) Must include: - Clear, semantic structure - Fully styled and responsive layout - At least one image group or diagram - A contact/feedback form - Navigation menu + active sections - Ethical and accessible design choices	2. Final Logbook (All 3 Entries + Reflection) Reflection must include: - What solutions I chose and why - How my design evolved from prototype to final version - What FCC concepts I applied - Improvements I would make if I had more time	3. Final Presentation (8–10 minutes) Students show: - The problem - The solutions - The webpage - The development process - Lessons learned
--	--	--

📁 PUTTING IT ALL TOGETHER — Suggested Logbook Structure

✓ Logbook Entry #1 — Problem Exploration

- Problem description
- Context and relevance
- Brainstormed solutions
- Early doubts and questions

✓ Logbook Entry #3 — Final Development

- Summary of final code decisions
- Challenges solved
- Accessibility and responsive adjustments
- Final solutions presented

✓ Logbook Entry #2 — Design & Prototype

- Chosen layout structure
- Wireframe
- Initial HTML/CSS decisions
- Early testing results
- Feedback from classmates
